

WORLDWIDE TV SIGNAL FINDER

For use with digital or analogue signals on either VHF/UHF frequencies

**Tune in your caravan TV in less time it takes to make that first cup of tea...
FANTASTIC!!**

Most TV's now use digital or auto search programme channel tuning and are very good, but in order to maximise, a good TV signal is required.

Most caravan and campers spend lots of frustrating time twisting and turning their directional aerials in an effort to find a good TV signal at their holiday location. Quite often the channels are limited in number and are of poor picture quality, because the aerial is not tuned inaccurately enough.

At last a simple solution is available – a smart hand-held signal finder.

Simply plug into your existing aerial system in your caravan, motor home or boat and with little effort the unit indicates the best direction to point your aerial. All this only takes a few seconds of your time and gives professional results.

The TV Signal Finder has been developed for the worldwide leisure market by Fringe Electronics Limited who have over the past 30 years specialised in TV Reception Equipment, Signal Amplification and Signal Distribution, and their products are extensively used throughout the UK and are the No. 1 choice of the professional TV Aerial Installers based on quality and prolonged performance.
